ACKNOWLEDGEMENT

There are many people who helped directly or indirectly on the successful completion of my major project.

I am very thankful to our project guide “**Mr. Anup Shekhar Chamoli**” who has been inspiring guide and committed caretaker for her unflinching devotion. The encouragement and support by her, especially in carrying out this project motivated me to complete this project.

I would like to thank Director of USCS “**Prof Dr. Sonal Sharma**” for providing us with all the necessary resources required to complete the project. We profusely are thankful to the program head of the department “**Dr. Sameer Dev Sharma**” for their valuable guidance.

I would like to express deep sense of gratitude to our staff members of Dept. of Computer Applications for their co-operation, which has given in the congruency to build up this project. I would like to thank all our friends for their help and constructive criticism during my project period.

Finally, I am very much indebted to my parents for moral support and encouragement to achieve goals. I have no words to express my gratitude and still I am very thankful to my parents who have shown me this world and for every support they gave me.

Name: Kunal Khatri

BCA IV SEM

DECLARATION

I hereby declare that the project report entitled **HOTEL BOOKING WEBSITE “BookOursHotels”** submitted by **Kunal Khatri Enrollment No. UU2409000173** to Uttaranchal School of Computing Science. The project was done under the Guidance of **Mr. Anup Shekhar Chamoli** . I further declare that the work reported in this project has not been submitted and will not be submitted, either in part or in full, for the award of any other degree or diploma in this university or any other university or institute.

Name:Kunal Khatri

BCA IV SEM

CERTIFICATE

This is to certify that the project entitled **HOTEL BOOKING WEBSITE “BookOursHotels”** by **Kunal Khatri Enrollment No. UU2409000173** and **Ankit Kumar Enrollment No. UU2409000044** and has been submitted in the partial fulfillment of the requirements for the award of the degree of BCA from Uttarakhand University, Dehradun. The results embodied in this project have not been submitted to any other University or Institution for the record of any degree.

Under the guidance of:

Mr. Anup Shekhar Chamoli

Assistant Professor

Uttarakhand School of Computing Sciences,

Uttarakhand University,

Dehradun

1. INTRODUCTION

The **BookOurHotels** system is a web-based hotel booking platform designed to help users easily search, explore, and book hotels online. In today's digital world, people prefer quick and convenient ways to plan their travel and accommodation. Traditional hotel booking methods often require visiting travel agencies or making phone calls, which can be time-consuming and inefficient. The BookOurHotels platform provides a modern solution to these problems by offering an online interface where users can view hotel details, compare prices, and make bookings instantly.

This system is developed using modern web technologies such as **HTML, CSS, JavaScript, TailwindCSS, and APIs like Leaflet Maps and Chart.js**. The platform provides several features including hotel search, filtering options, interactive maps, user authentication, booking management, payment simulation, and an admin dashboard. These features allow users to easily manage their travel plans while administrators can monitor bookings and system activities.

The main purpose of this project is to create a **user-friendly and efficient travel booking system** that simplifies the process of finding and reserving hotels. The system also focuses on providing a responsive design, secure user interaction, and a smooth booking experience.

Additionally, an **Admin Panel** is provided to monitor revenue, user base, and booking statistics through an analytics dashboard and data management tools. This dual interface design allows the platform to act as a realistic hotel booking system suitable for academic study or a real-world commercial prototype.

Another important aspect of this system is the integration of **interactive maps** that allow users to view hotel locations visually. This feature helps users understand the exact location of hotels and nearby attractions, making travel planning more convenient. The system also supports multiple currencies and provides notifications and alerts for important actions such as successful bookings.

The design of the **BookOurHotels platform** focuses on simplicity, accessibility, and efficiency. The interface is responsive, meaning it can adapt to different screen sizes and devices, including desktops, tablets, and smartphones. This ensures that users can access the system anytime and anywhere. Security features such as user authentication, session management, and input validation are also included to protect user data and maintain system reliability.

2. OBJECTIVE

The objective of the **BookOurHotel – Hotel Booking System** is to design and develop a comprehensive online booking platform that enhances the experience of hotel reservation through advanced search capabilities, interactive features, secure transactions, and administrative control.

Key objective

1. To digitalize the hotel booking process

Transforming traditional manual reservation into an automated online system for faster and more accurate service.

2. To simplify hotel search and comparison

Allow users to easily filter hotels based on price, location, and rating so they can choose the best option.

3. To improve accessibility and convenience

Provide a platform that is available 24/7 from any device (mobile, tablet, laptop, desktop).

4. To show complete hotel details in a single interface

Including images, pricing, address, ratings, and descriptions to assist users in informed decision-making.

3. SYSTEM ANALYSIS

In the case of the **BookOurHotels** platform, system analysis focuses on understanding the traditional hotel booking methods and designing a modern web-based solution that provides better efficiency, convenience, and accessibility.

3.1 EXISTING SYSTEM

Some of the major problems in the existing system include:

- Customers have limited access to hotel information.
- Booking a room requires contacting multiple hotels or travel agents.
- The process is time-consuming and sometimes inconvenient.
- It is difficult to compare hotel prices, services, and availability.
- Manual record keeping can lead to errors and data loss.

3.2 PROPOSED SYSTEM.

The proposed system provides several advantages, such as:

- Easy online hotel searching and booking.
- Access to complete hotel details including price, location, rating, and amenities.
- Interactive maps to view hotel locations.
- Secure login and user account management.
- Booking confirmation and downloadable receipts.
- Ability to cancel bookings if needed.
- Admin dashboard for monitoring users and bookings.

3.3 FEASIBILITY STUDY

The feasibility study of the **BookOurHotels system** includes the following aspects:

- Technical Feasibility
- Economic Feasibility
- Operational Feasibility

3.3.1 TECHNICAL FEASIBILITY

The **BookOurHotels system** is technically feasible because it is developed using commonly available and widely used web technologies such as **HTML, CSS, JavaScript, and TailwindCSS**. These technologies are easy to implement and supported by all modern web browsers. Additional tools such as **Leaflet Maps** for displaying hotel locations and **Chart.js** for visualizing booking statistics enhance the functionality of the system.

3.3.2 ECONOMIC FEASIBILITY

The **BookOurHotels project** is economically feasible because it is developed using **open-source technologies** and free development tools. Technologies such as HTML, CSS, JavaScript, TailwindCSS, and other libraries used in the system do not require any licensing cost. This significantly reduces the overall development cost.

3.3.3 OPERATIONAL FEASIBILITY

The **BookOurHotels system** is designed with a simple and user-friendly interface that allows users to easily navigate through the platform. Users can search for hotels, view hotel details, book rooms, and manage their bookings without requiring technical knowledge.

The system also provides features such as **notifications, booking history, cancellation options, and downloadable receipts**, which improve the overall user experience. The admin panel allows administrators to monitor bookings, manage users, and analyze system data efficiently.

3.4 PROJECT PLANNING

The **BookOurHotels project**, project planning was done to structure the development process in a systematic manner. The development was divided into several phases so that each stage could be completed efficiently.

The main steps involved in project planning are:

1. **Requirement Analysis**

In this phase, the requirements of the system were identified. The features needed for the project such as hotel search, booking system, user login, payment simulation, and admin dashboard were analyzed.

2. **System Design**

During this stage, the overall structure of the system was designed. This includes designing the user interface, system architecture, and data models required for the platform.

3. **Development Implementation**

In this phase, the actual coding of the system was performed using technologies such as **HTML, CSS, JavaScript, and TailwindCSS**. Various features like hotel search, booking functionality, map integration, and user authentication were implemented.

4. **Integration of Additional Features**

Additional tools and libraries such as **Leaflet Maps for location display, Chart.js for data visualization, and JavaScript-based storage for managing booking data** were integrated into the system.

5. **Testing Phase**

The system was tested to ensure that all functionalities such as login, booking, payment simulation, and admin features were working correctly without errors.

6. **Documentation**

In this final stage, all details related to the project including system analysis, design diagrams, implementation details, and testing results were documented in the project report.

3.5 PROJECT SCHEDULING

In the **BookOurHotels project**, scheduling was done to divide the development process into different phases. Each phase of the project was assigned a specific time duration to ensure systematic development and timely completion. The scheduling process helped in tracking progress and managing different activities involved in the project.

The main activities involved in project scheduling are:

1. **RequirementAnalysis**

Understanding the project requirements and identifying the main features needed for the system such as hotel search, booking system, user authentication, and admin panel.

2. **System Design**

Designing the structure of the system including interface layout, system architecture, and data models.

3. **System Development**

Writing the program code using technologies such as HTML, CSS, JavaScript, and TailwindCSS to implement the required functionalities.

4. **Integration of Features**

Adding advanced features such as interactive maps, hotel filters, booking management, and admin dashboard.

5. **Testing and Debugging**

Checking the system for errors and ensuring that all modules work correctly and efficiently.

6. **Documentation and Final Submission**

Preparing the project report and organizing all project files for final submission.

3.5.1 GANTT CHART

3.6 SOFTWARE REQUIREMENT SPECIFICATION

The **Software Requirement Specification for the BookOurHotels system** describes the functional and non-functional requirements needed for the development and operation of the online hotel booking platform. It provides a clear understanding of how the system will work and what services it will provide to users and administrators.

The main components of the SRS for the **BookOurHotels system** include functional requirements and non-functional requirements.

3.6.1 FUNCTIONAL REQUIREMENTS

Functional requirements describe the specific functions and operations that the system must perform.

S.No	Module	Functional Requirement	Description
1	User Registration	Create Account	Users can sign up using email, phone, or social login
2	User Login	Authentication	Users can securely log in and log out
3	Profile Management	Edit Profile	Users can update personal details, password, preferences
4	Hotel Search	Search Hotels	Users can search hotels by location, date, price, rating
5	Filters & Sorting	Advanced Filters	Filter by price, amenities, ratings, room type
6	Hotel Details	View Hotel Info	Display images, description, facilities, reviews
7	Room Availability	Check Rooms	Show available rooms based on selected dates

8	Booking System	Book Room	Users can select rooms and confirm booking
9	Payment Gateway	Online Payment	Support multiple payment methods (UPI, cards, wallets)
10	Booking History	View Bookings	Users can see past and upcoming bookings
11	Cancellation	Cancel Booking	Users can cancel bookings based on policy
12	Notifications	Alerts	Email/SMS confirmation for booking, cancellation
13	Reviews & Ratings	Feedback System	Users can rate and review hotels
14	Admin Panel	Manage Hotels	Admin can add/update/delete hotel listings
15	Admin Dashboard	Reports	View booking reports, user data, revenue stats
16	Customer Support	Help System	Chat/email support for user queries
17	Multi-language	Language Support	Users can change website language
18	Currency Converter	Currency Selection	Display prices in different currencies
19	Wishlist	Save Hotels	Users can save favorite hotels
20	Map Integration	Location View	Show hotel location on map

3.6.2 NON-FUNCTIONAL REQUIREMENTS

S	Categ	Non- Functi onal Requir ement	Description
1	Perfor	Fast Response Time	Pages should load within 2–3 seconds
2	Perfor	Scalability	System should handle increasing users and bookings
3	Availa	Uptime	System should be available 24/7 with minimal downtime
4	Securit	Data Protection	User data must be encrypted (HTTPS, secure login)

5	Security	Authentication	Secure login with password protection and validation
6	Usability	User-Friendly UI	Easy navigation and simple interface
7	Usability	Accessibility	Accessible on mobile, tablet, and desktop devices
8	Compatibility	Cross-Browser Support	Works on Chrome, Firefox, Edge, Safari
9	Reliability	Error Handling	Proper error messages and system recovery

3.7 SYSTEM SPECIFICATION

SOFTWARE USE

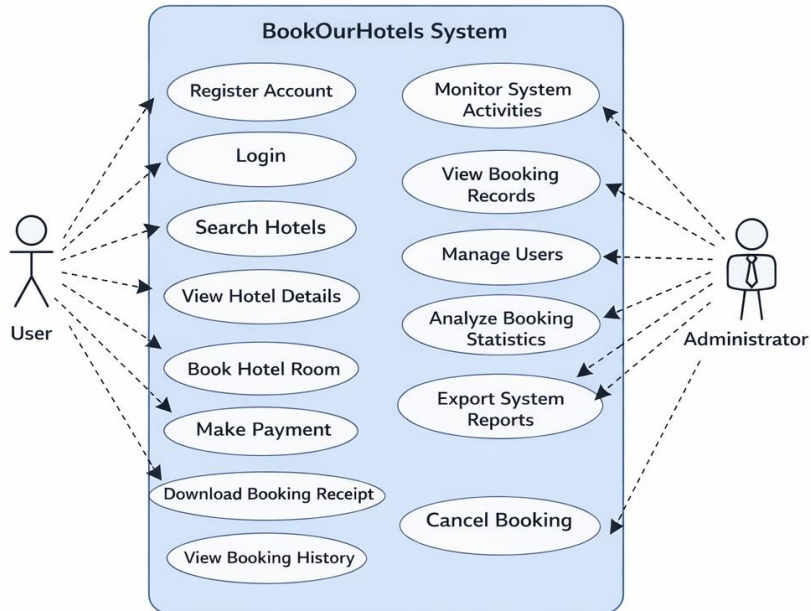

Category	Requirement	Description
Operating System	Windows / macOS / Linux	Compatible with major platforms
Frontend Technologies	HTML5, CSS3 (Tailwind CSS), JavaScript (ES6+)	Used for UI design and client-side functionality
Browser	Google Chrome, Mozilla Firefox, Safari, Microsoft Edge	Needed to run the web-based system
Storage	LocalStorage (Browser-based DB)	Stores users, bookings, and session data
External Libraries	Leaflet.js, Chart.js, FontAwesome	For maps, charts & icons
Code Editor	VS Code / Sublime / Atom	For development and modification of code
Package/CDN Resources	Tailwind CDN, Confetti CDN, Google Fonts	Integrated for enhanced UI design
Version Control (Optional)	Git / GitHub	For project tracking and collaboration

HARDWARE USE

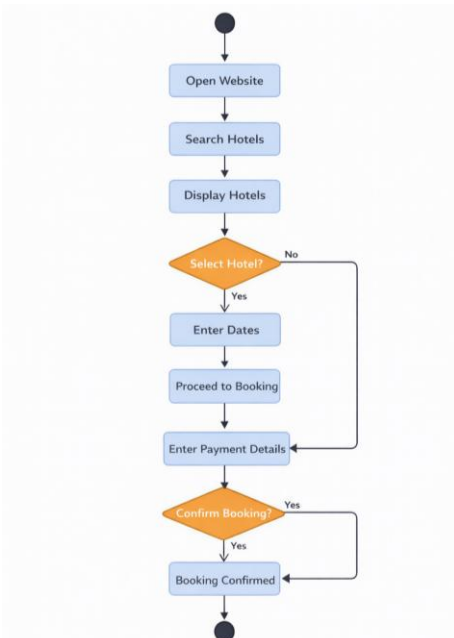

Component	Minimum Requirement	Recommended
Processor	Intel Dual Core or Equivalent	Intel i5 / Apple M1 or above
RAM	4 GB	8 GB or higher for smooth development

3.8 DATA MODEL

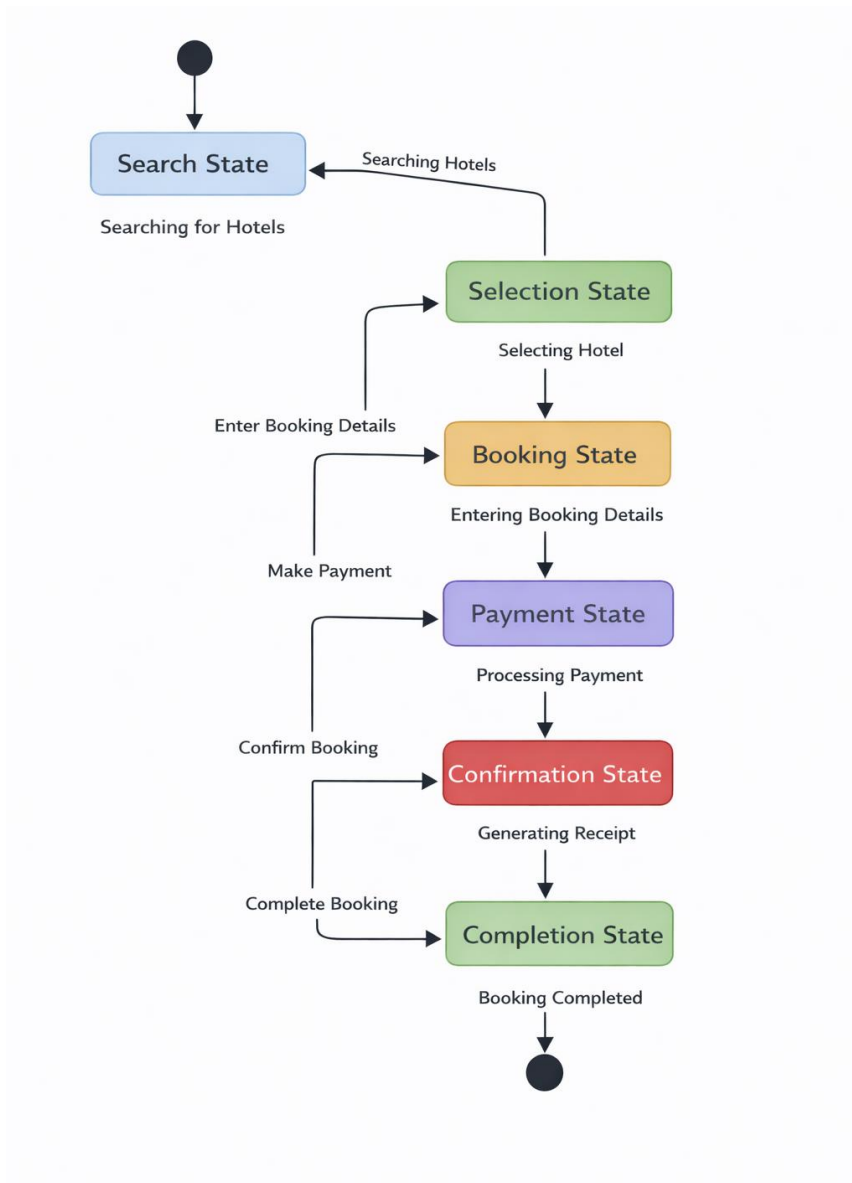

3.8.1. USE CASE DIAGRAM

3.8.2. ACTIVITY DIAGRAM

3.8.3. STATE DIAGRAM

4. SYSTEM DESIGN

The **BookOurHotels system** is designed as a web-based hotel booking platform that allows users to search for hotels, view hotel information, make bookings, and manage their travel plans easily.

4.1 MODULARIZATION DETAILS

Each module performs a specific task and helps in simplifying the development and maintenance of the system.

The **BookOurHotels system** is divided into the following modules:

1. User Authentication Module

- Allows users to register and log in to the system.
- Maintains user profiles and login credentials.

2. Hotel Search Module

- Enables users to search hotels by location or hotel name.
- Displays hotel listings with price, rating, and amenities.

3. Hotel Details Module

- Shows complete information about the selected hotel.
- Displays hotel images, location, price, and available facilities.

4. Booking Module

- Allows users to select check-in and check-out dates.
- Calculates booking cost and confirms reservations.

5. Payment Module

- Simulates payment processing for hotel booking.
- Generates booking confirmation after successful payment.

6. Booking History Module

- Allows users to view their previous bookings.
- Provides option to cancel bookings if required.

7. Admin Management Module

- Allows administrators to monitor users and bookings.
- Displays booking statistics and system reports.

8. Notification Module

- Sends alerts and notifications for booking confirmations and updates.

These modules work together to provide complete functionality of the **BookOurHotels platform**.

4.2 DATABASE DESIGN

In the **BookOurHotels** system, the database stores information related to users, hotels, and bookings.

Main Tables in the Database

1. Users Table

Field Name	Description
User_ID	Unique ID for each user
Name	Name of the user
Email	User email address
Password	Login password
Role	User role (User/Admin)

2. Hotels Table

Field Name	Description
Hotel_ID	Unique ID of the hotel
Hotel_Name	Name of the hotel
Location	Hotel location
Price	Cost per night
Rating	Hotel rating

3. Bookings Table

Field Name	Description
Booking_ID	Unique booking ID
User_ID	ID of the user
Hotel_ID	ID of the hotel
Check_In	Check-in date

5. TESTING

Testing is performed to ensure that the system works correctly and all functionalities operate as expected. The **BookOurHotels system** was tested with different test cases to verify the accuracy and reliability of the application.

Types of Testing Performed

1. Unit Testing

Unit testing is performed to test individual components or modules of the system separately. Each module such as login, hotel search, booking system, and payment module is tested individually to ensure that it functions correctly.

2. Integration Testing

Integration testing checks how different modules of the system work together. In the **BookOurHotels system**, modules such as hotel search, booking system, and payment module were integrated and tested to ensure smooth communication between them.

3. System Testing

System testing evaluates the entire system to verify that all features and functionalities are working properly. The complete workflow of searching hotels, booking rooms, and generating receipts was tested during this phase.

4. User Acceptance Testing

User acceptance testing ensures that the system meets the requirements of the users. In this stage, the system was tested from the user's perspective to confirm that the interface is user-friendly and easy to operate.

Testing Table

Test Case ID	Module	Test Description	Input	Expected Output	Result
TC01	Login System	Check user login with valid credentials	Valid Email & Password	User successfully logs in	Pass
TC02	Login System	Check login with invalid credentials	Invalid Email/Password	Error message displayed	Pass
TC03	Registration	Register new user	Name, Email, Password	User account created successfully	Pass
TC04	Hotel Search	Search hotels by location	Location name	List of hotels displayed	Pass
TC05	Hotel Details	View hotel details	Select hotel	Hotel information displayed	Pass
TC06	Booking Module	Book hotel room	Check-in & Check-out date	Booking confirmation shown	Pass
TC07	Payment Module	Enter payment details	Card number, expiry, CVC	Payment processed successfully	Pass
TC08	Booking History	View user bookings	User login	Booking history displayed	Pass
TC09	Cancel Booking	Cancel a confirmed booking	Booking ID	Booking status updated to cancelled	Pass
TC10	Admin Panel	View booking records	Admin login	Booking data displayed	Pass

6. SYSTEM SECURITY MEASURES

In the **BookOurHotels** system, several security measures have been implemented to maintain data privacy, protect user accounts, and ensure safe system operation.

The following security measures are used in the system:

1. User Authentication

The system requires users to register and log in using their email and password. This ensures that only authorized users can access their accounts and booking information.

2. Secure Login Validation

The system verifies the user's login credentials before granting access. Invalid login attempts are rejected and an error message is displayed to prevent unauthorized access.

3. Session Management

The system includes session control mechanisms that automatically log out users after a period of inactivity. This helps prevent unauthorized access if the user leaves the system unattended.

4. Input Validation

All user inputs such as login details, booking information, and payment details are validated to prevent incorrect or harmful data from being entered into the system.

5. Role-Based Access Control

The system provides different access levels for **users and administrators**. Normal users can search and book hotels, while administrators have special privileges to manage users, bookings, and system reports.

7. REPORTS

These reports help administrators monitor the system performance and maintain records efficiently.

Reports generated in the system include:

- **Booking Report**

Displays detailed information about hotel bookings such as booking ID, user name, hotel name, check-in date, check-out date, and payment status.

- **User Registration Report**

Shows information about registered users including user name, email, and account details.

- **Hotel Availability Report**

Displays the list of available hotels along with their location, price, rating, and amenities.

- **Revenue Report**

Shows the total revenue generated from hotel bookings. This helps administrators analyze the performance of the system.

- **Booking History Report**

Allows users to view their previous bookings and transaction details.

- **System Activity Report**

Records system activities such as login attempts, bookings, cancellations, and admin operations.

8. FUTURE SCOPE

The **BookOurHotels** system provides many useful features, additional functionalities can be implemented to improve the system further.

Future improvements of the system include:

1. **Online Payment Integration**

- Integration with real payment gateways such as **Optimism pay, Razorpay, PayPal, or Stripe.**

2. **Mobile Application Development**

- Developing an Android or iOS mobile application for easier access.

3. **Real-Time Hotel Availability**

- Connecting the system with real hotel databases to display live room availability.

4. **AI-Based Hotel Recommendations**

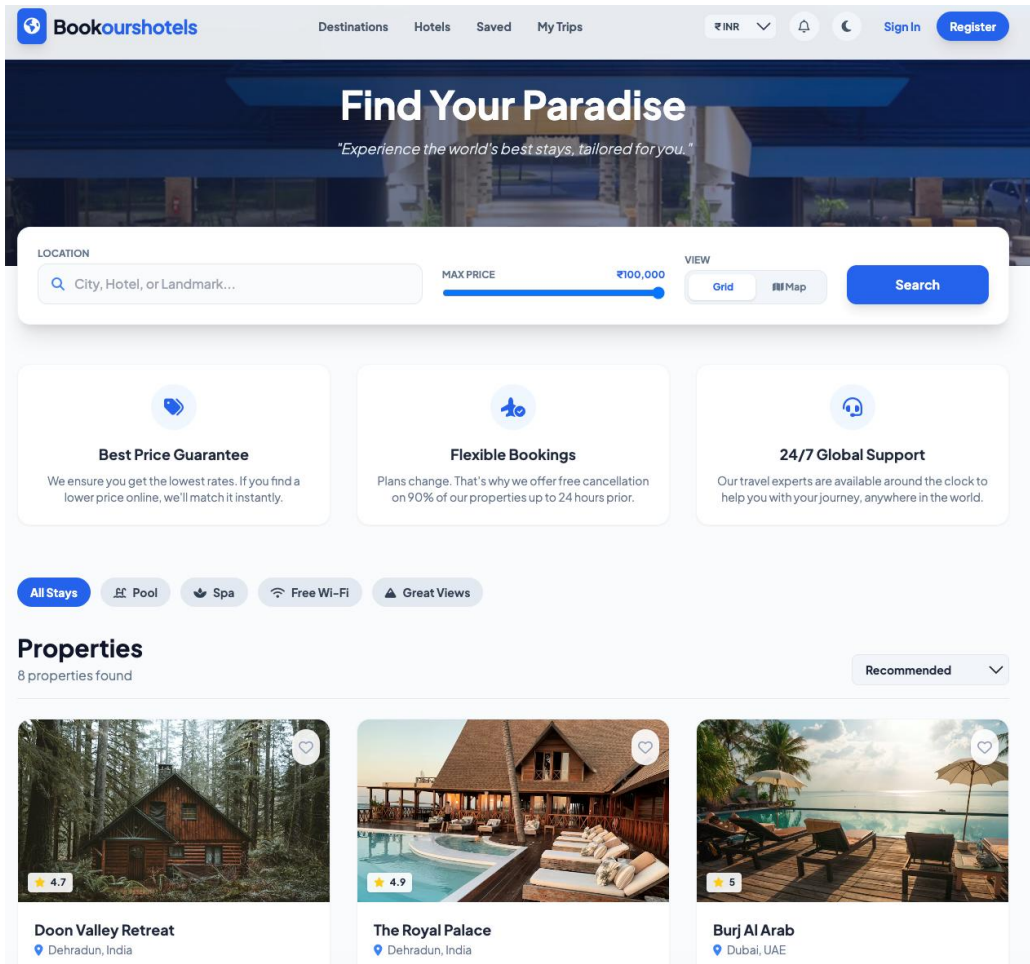

- Using artificial intelligence to recommend hotels based on user preferences.

5. **Multi-Language Support**

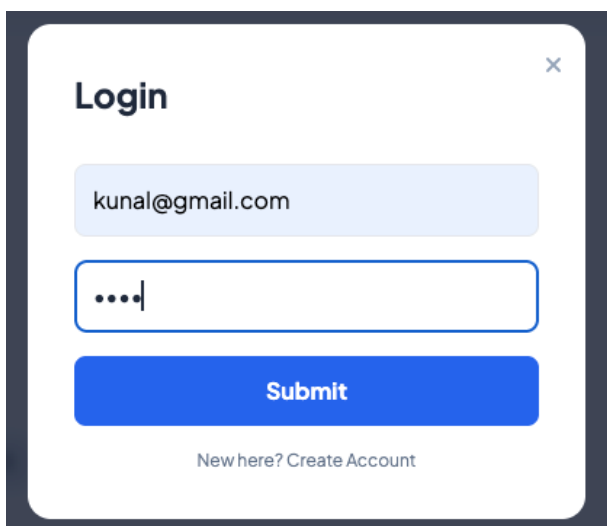

- Allowing users to use the system in different languages.
